## Orlando Cosmetic Surgeon Introduces **NaturalFill™**

A Permanent and Natural  
Alternative to Injectable Fillers

(Orlando, FL) **Roger Bassin, M.D.** cosmetic surgeon and Medical Director of the Bassin Center for Facial Plastic Surgery, has introduced a revolutionary new approach to filling lines and wrinkles and plumping up the skin on the face with NaturalFill™. NaturalFill is a fat grafting procedure also known as fat transfer or lipoinjection in which fat cells are harvested from one part of the body and injected into another. It is a procedure with few surgical complications and is most commonly used to provide the face with a more youthful appearance which is permanent.

**Dr. Bassin** has pioneered the Aqua-Lipo procedure which provides a novel approach to removing fat. By utilizing the Body-Jet technology to gently dislodge intact fat cells, **Dr. Bassin** is able to remove viable fat cells, which can be immediately used for fat transfer to other parts of the body.

Until now, the recovery of fat from liposuction patients has been a laborious process, involving centrifuges and prolonged time to 'process' the fat before use for injection. A process which in the past would have taken hours can now be done in a single office visit, saving the doctor time and the patient additional appointments and money.

**Dr. Bassin** uses the Aqua-Lipo procedure to gently remove fat cells from areas like the stomach, thighs, hips or lower back, and then transfers the fat via small injections to other areas of the body which are in need of filling or additional volume.

NaturalFill patients require only one treatment and results are permanent. Results are seen immediately and there is no downtime. With the poor economy and patients looking to invest in cosmetic procedures that will produce longer lasting results, NaturalFill is an excellent alternative to temporary fillers using hyaluronic acid or collagen which require repeat injections every six to nine months. Additionally, patients may experience "injection fatigue" when using fillers such as Restylane, Juvaderm and Radiance to name a few, and may require treatments on a more frequent basis.

"There is no question that fat is the ideal material for soft tissue augmentation, and that the results obtained with NaturalFill are the most natural-appearing and long lasting," says **Bassin**. There are no known side effects with NaturalFill as opposed to other fillers which may cause inflammation, infection, migration and granuloma formation. NaturalFill is extremely safe as it is a natural substance from your own body.
